LINDE PROCESS SERVICE Assures Dependable Welds

WHEN American industry is called upon for welded construction or assembly where the joint must be dependably strong and tight it adopts oxy-acetylene welding under Linde Procedure Control.

Linde Procedure Control is available to users of Linde Oxygen as a part of Linde Process Service. It provides design assistance, careful attention to selection of materials, instruction in correct welding technique and all other essential factors of good welding practice. It translates methods proved from a fundamental welding background into the actual needs of the specific welding application. It permits the Linde organization to focus upon the problems of one user of Linde Oxygen the combined experiences of thousands and the day-by-day discoveries of a large research staff.

Several valuable and interesting technical booklets describing the application of the oxy-acetylene process of welding and cutting in design, construction and fabrication are available. Tomorrow's engineers will be expected to know how to apply this modern metal-working process. Write us if you are interested.

Where college days end, Opportunity begins

Student engineers who graduate this year will soon be called upon to use their knowledge for the benefit of Industry, either in the designing of machinery or in selecting equipment to meet advanced production demands.

No matter which of these responsibilities may ultimately become yours, you will find in Timken Bearings one of your most powerful weapons with which to fight friction; power and lubricant wastage; inefficient operation; excessive maintenance expense and rapid depreciation.

Whatever you require anti-friction bearings to do, Timkens will do with utmost effectiveness.

Because of Timken tapered construction, Timken positively aligned rolls and Timken-made steel, they carry all types of loads—all radial, all thrust or both together in any combination.

Industry has signified its approval of Timken Bearings by selecting them for its toughest jobs in all types of machinery. The Timken Roller Bearing Co., Canton, O.
